

INSTALLATION MANUAL | SOLO

Assembly Guide - Important Information

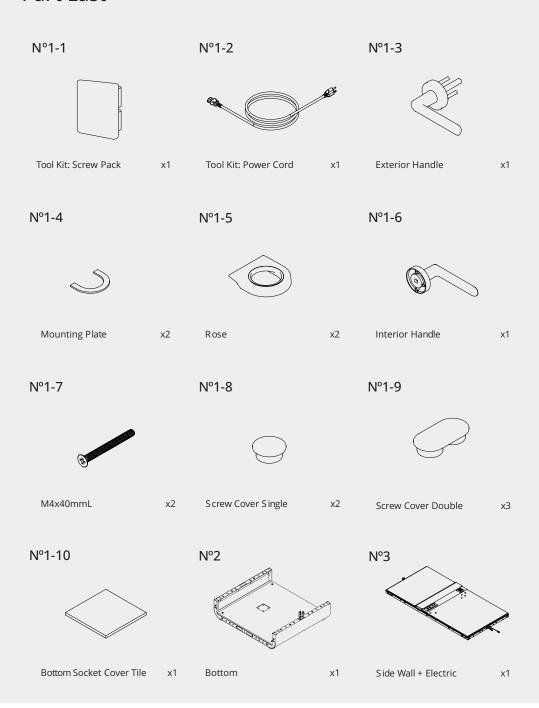

- 1. This assembly guide is specifically for the right-hand opening door of the Kolo Solo unit without furniture.
- 2. The packaged Kolo Solo unit weighs 271 kg and should be installed by 2-3 individuals. The installation process typically takes an average of 30 to 45 minutes.
- Exercise caution during assembly and ensure that the installation site is protected to prevent any injuries or damage to the product or its surroundings.
- 4. Position and assemble the Kolo Solo unit as close as possible to its final placement. If necessary, the fully assembled unit can be repositioned by retracting the four levelling feet and moving it using the bottom rollers. However, be cautious not to push the unit against the direction of the rollers to avoid tipping or damaging them.
- 5. Ensure that you have all the required tools & parts listed from page 03 to 06 before starting the assembly process.
- 6. We recommend maintaining a minimum of 30 cm of space between the wall or between multiple units of the Kolo Solo.
- 7. Verify that the power source for the Kolo Duo can safely handle a load of 10 amps. When the ventilation is active, the LED light is at its full illumination, and the power charging station is not in use, the wattage usage is 22W. The power cord fuse is set at 7 amps to prevent overloading.
- 8. The Kolo Duo unit includes 2 AC power outlets and 2 USB charging outlets. Do not connect any electronic devices that require more than 5 amps.
